

1) Security Features in Real-World Applications

Application	Security Feature	Security Mechanism	Protocol / Technology	How it provides security
Google Pay	Authentication & Confidentiality	UPI PIN, Encryption	UPI, Tokenization	Verifies the user and protects payment details.
ChatGPT	Confidentiality & Authentication	Encryption, MFA	TLS, AES-256, MFA	Protects user data and prevents unauthorized access.
LinkedIn	Authentication	2FA	SMS, Authenticator App	Adds an extra step to verify the user's identity.
Groww	Confidentiality & Authentication	PIN, OTP, Encryption	HTTPS/TLS	Verifies users and protects financial information.
Myntra	Confidentiality & Integrity	Secure payment, Encryption	HTTPS/TLS, OTP	Protects customer data and prevents unauthorized transactions.

2) Security Controls in Real-World Applications: Prevention, Detection and Recovery

Application	Security Control	CIA	Mechanism / Protocol	Prevention	Detection	Recovery
Google Pay	UPI PIN & Encryption	Confidentiality	UPI, Tokenization	Prevents unauthorized payments and protects payment data.	Detects suspicious transactions.	Fraud reporting and transaction recovery help users.
ChatGPT	Encryption & MFA	Confidentiality	TLS, AES-256, MFA	Prevents unauthorized access to user data.	Detects suspicious account activity.	Account recovery helps restore access.
LinkedIn	Two-Factor Authentication	Confidentiality	2FA, Authenticator App	Prevents unauthorized account login.	Detects unusual login attempts.	Password reset and account recovery restore access.
Groww	PIN, OTP & Encryption	Confidentiality	OTP, HTTPS/TLS	Protects financial information and prevents unauthorized access.	Detects suspicious account activity.	Account recovery and security support help restore access.
Myntra	Secure Payment & Encryption	Integrity	HTTPS/TLS, OTP	Prevents unauthorized transactions and changes.	Detects suspicious payment activity.	Cancellation, refund and account recovery help resolve issues.
